TO THE KIND ATTENTION OF: TECHNICAL DEPARTMENT / PURCHASING DEPARTMENT
SUBJECT: APPLICATION OF THE EUROPEAN REGULATION N. 640/2009

Dear Client,

Since 1954 Aerotecnica Coltri® has been producing high pressure compressors for breathable air, following the needs and the spirit of a constantly evolving market, not only in terms of sales but also with respect to the community requirements as well as to our lifestyle which are fundamental priorities for major companies.

Today the three-phase electrical motors, which our self produced compressors are equipped of, are going to change character and become compliant with the new energy standards based on minimum guaranteed performances.

The new three-phase electrical motors, starting from 0,75 Kw up to 375 Kw, that will be installed on compressors produced by Aerotecnica Coltri®, will be more efficient and will consume less energy, in compliance with the reference class IE2. Aerotecnica Coltri® and its clients are pleased by the fact that the company complies with the European standard 2005/32/CE relative to environment-friendly design specifications.

The new three-phase electrical motors will be installed, in compliance with the standard, when inventory of IE1 motors is finished.

This high efficiency evolution leads to technical and design solutions which are not cost-exempt.

These further costs, which will be presented and documented by our management, are going to satisfy our clients even more regarding the production of compressors by Aerotecnica Coltri®, a company that is reaching energy efficiency levels and production ameliorations.

Improving the quality of our products is our greatest satisfaction.
